Mobility changes

Google prepared this report to help you and public health officials understand responses to social distancing guidance related to COVID-19. This report shouldn't be used for medical diagnostic, prognostic, or treatment purposes. It also isn't intended to be used for guidance on personal travel plans.

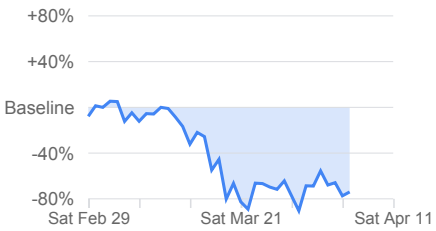
Location accuracy and the understanding of categorized places varies from region to region, so we don't recommend using this data to compare changes between countries, or between regions with different characteristics (e.g. rural versus urban areas).

To learn how we calculate these trends and preserve privacy, read About this data.

Retail & recreation *

-74%

compared to baseline

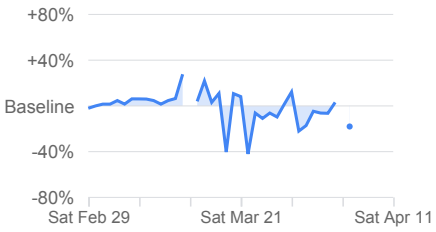


Mobility trends for places like restaurants, cafes, shopping centers, theme parks, museums, libraries, and movie theaters.

Grocery & pharmacy *

-18%

compared to baseline

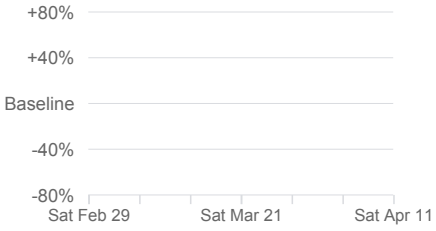


Mobility trends for places like grocery markets, food warehouses, farmers markets, specialty food shops, drug stores, and pharmacies.

Parks *

Not enough data for this date

compared to baseline



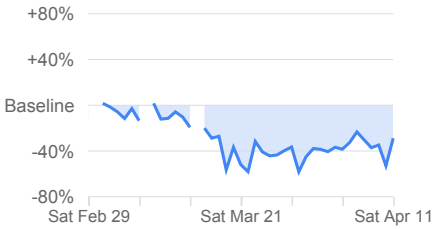
Mobility trends for places like national parks, public beaches, marinas, dog parks, plazas, and public gardens.

* **Not enough data for this date**: Currently, there is not enough data to provide a complete analysis of this place. Google needs a significant volume of data to generate an aggregated and anonymous view of trends.

Transit stations

-29%

compared to baseline



Mobility trends for places like public transport hubs such as subway, bus, and train stations.

Workplaces *

-79%

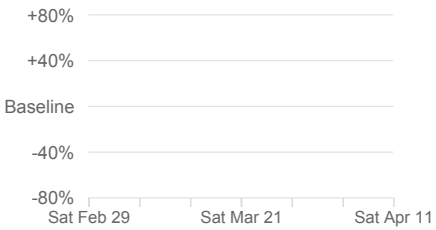
compared to baseline

Mobility trends for places of work.

Residential *

Not enough data for this date

compared to baseline



Mobility trends for places of residence.

* **Not enough data for this date**: Currently, there is not enough data to provide a complete analysis of this place. Google needs a significant volume of data to generate an aggregated and anonymous view of trends.
